This solution requires the basic Home-Server package and the Branch Server for each of the brach stores.

GenieSTAR Print Manager

Print manager is designed to effortlessly catalogue customer orders sent from Dakis's online photo solution or GenieSTAR kiosks, process print jobs, manage customers' contact information and shopping histories, and view daily/monthly printing status reports. Key features include,
- display the order in an easy-to-read format
- select and print either all or specific orders
- automatically skip preview process and directly send orders to a minilab for printing if desired
- print orders to a minilab or any other photo printer

Streamline your Workflow

GenieSTAR Print Manager

A perfect back-end management tool that helps you speed up the previously complicated routine of matching orders with prints and increase efficiency on order handling times.

Print Manager

Print to minilab or photo printer

- display the order in an easy-to-read format
- select and print either all or specific orders
- automatically skip preview process and directly send orders to a minilab for printing if desired
- print orders to a minilab or any other photo printer
- may be customized to work with other order format

Software key features:

Receive and print orders

As soon as a Dakis order or a kiosk order is received, users are able to print without delay. GenieSTAR Print Manager automatically retrieves orders from the Dakis Job Downloader and the GenieSTAR kiosk software; the software can read and display the order data in an easy-to-read format. GenieSTAR Print Manager clearly shows all the order data users need to quickly select and print either all or specific orders. Orders can be re-printed with ease as well.

Preview orders

On the preview page, users can view thumbnails of all the images within the order. The preview function allows users to rotate images, adjust colors, and fine-tune cropping. An optional automatic red eye reduction tool is also available.

Manage customer information

Our Membership Manager creates daily or monthly reports and allows users to track customers. Users may track customer data such as names, addresses, e-mail addresses, phone numbers, and shopping histories.
